ACKNOWLEDGEMENT

We would like to express our heartily thank to our **Purbanchal University** for including this Project I as the part of the curriculum.

We also expand our deepest gratitude to our **Khwopa Engineering College** and Department of Computer Engineering (**HOD. Er. Bikash Chawal** and all the faculty members) for providing us with a wonderful environment, excellent guidance, and supervision.

With Regards,
Jayadev Tripathi
Sahana Shrestha
Sanjib Kasti
Upendra Shahi

ABSTRACT

Apart from the general understanding, Literature is a broad field including several genres. Literature speaks the emotions, stories, fiction, science, nonfiction, poetry, dramas, education, morals, values, ethics, love, understandings, satires, mysteries, fantasies, histories, politics, horrors, adventures and even more. It goes deeper as you go deep and climb high if you follow its height. Indeed, the journey in the world of literature is always amazing, fruitful, and full of new experiences of humanity, nature, society, imagination, and reality.

Our project LEAF (Literature Efficient Architecture Folio) is an architecture for the manipulation of literature-based contents and creations. It is an efficient platform for all literature enthusiasts.

The system is based on the localized server (i.e. data are stored only in the local system or user's system). Supporting multiple users to engage in a system and have their interaction, the system provides secured sessions. Also providing limiting functionality to the guest users, it is totally concerned in promoting the enthusiasm in literature and help in organizing users' creations enabling them to create their project and collaborate by adding the members who can access through their own credentials in the same system.

This console-based application will also allow the user to view their analytics and engagements, read the loaded contents and bookmark the preferred and impressive one. Tying with the fluent, organized, and user-friendly experience; project LEAF will be part in taking your literature experience to new height

Keywords: - LEAF, Literature, Analytics, Articles

CHAPTER- 1

INTRODUCTION

1.1 Background

In today's digital world, every field has been randomly digitized. To cope with the efficient digitization in the field of literature LEAF has been developed with prime motive to enrich the user experience with the efficient architecture and user-friendly interface. This project aims to ease users with exciting features and promotes their enthusiasm in literature.

The system allows the user to register into the system and also allows to create the new user. This facilitates the secured sessions which includes logging out user automatically after certain course of inactivity. It remembers the last logged user too. It even allows the user to interact with the system without registering or logging in; but with the limited functionalities. To gain the complete system user registration and logging in is mandatory,

After you login to the system, there is option to choose between general, professional and the management mode. Management mode includes logging you out, changing the user credentials and managing your collaborators. As, every author or literature enthusiasts want their literature identity by their preferred nickname, this system facilitates this too under this section.

Included in the professional mode, you can carry out any specific literature projects by adding collaborators, setting the remainders and tracking your each session's progresses. You can even give the relevant system feedbacks.

Inside into the general mode, you can use the available templates, read and add the contents, keep your general notes, have conversation with the collaborators, bookmark the preferred articles and view the logs and the project description.

Beside these the system provides search functionalities, tags management too.

Once you terminate the program, you are automatically logged out of the system and requires to enter the password again to enter into the system.

1.2 Problem Statement:

In this digital era, everyone desires to organize their notes in the regular basis. They want to experience their literature experience in a single platform having multiple functionalities and simple and efficient interface. They want to keep records, add teams, have conversation, manage tags, have search functionality and track progress too. And this is mandatory if one wants to move ahead in any respective field.

1.3 Objective:

The main objective of project LEAF is to develop a user friendly and multi-functionality literature repository.

1.4 Features and functionalities of LEAF application:

- User Registration and Login
- Create, Edit, and Delete Literature Entries
- Categorization, Tagging and Bookmarking
- Search Functionality
- Formatting and Styling
- Import and Export

- Random Post Display
- User management
- Security
- Command-Line Interface (CLI)
- Error handling
- Documentation and Help

1.5 Significance & Scope:

This project LEAF will be outstanding platform to explore the literature field. This will be useful for one seeking for the tool to enable them to record their creation and gather as a project. This will entirely give outstanding experience of the literature field and helps the individuals to explore their creativity, record it in organized manner, and view the progress track.

This also enables to upload ones favorite contents and read it during the leisure.

CHAPTER 2

LITERATURE REVIEW

In this era of advanced technologies, the world is caught up in a single computer or digital device. Every moment and all human activities are associated with the digital platform. Aside, literature is the magic that can overcome sorrows, pain, and loneliness and motivates in every failure and further encourage to achieve the goal. In the digital era, the development of applications provides an amazing platform for organizing and creating literature.

Margaret Atwood: "As we embrace technology, we must ensure that literature remains at the heart of the digital age. Software development should enhance storytelling rather than overshadow it, preserving the beauty of language and the power of imagination."

The application like memo in the early keypad phones to the evolved application like: Google Keep, Evernote, Microsoft OneNote, Todoist, and soon clarifies the importance of the habit of note takings. On the other side, Evernote, Instapaper, Pocket, Flipboard, Readwise, etc. applications are popular for accessing and reading the literature contents.

"Notes are stored in virtual "notebooks" and can be tagged, annotated, edited, searched, and exported." Evernote ^[1]

"You can create, edit, and share notes with Google Keep." ^[2]

Neil Gaiman: "Software development is an ally to authors, empowering us to explore innovative narrative structures and collaborate with readers in unprecedented ways. The digital realm offers endless possibilities to enhance and expand the reader's experience."

Salman Rushdie: "Technology has reshaped the literary landscape, enabling us to transcend traditional boundaries. Through software development, we can create multi-dimensional narratives and amplify diverse voices, fostering a truly global literary community."

From the above statements from prominent authors, as a user, every individual wants a well-organized application that not only allows one to create notes and general articles or just provides written articles to look over, but they also want wide range of features that enhance the overall literature experience. Google Keep is concerned only with keeping, editing, and sharing notes while Evernote facilitates reading articles more. However, they lack allowing user to create their typical literature projects, classifying the literature genre, set the nickname, track their analytics, add the collaborator securely, manage tags and search for the prominent literature figures in the same platform.

As the one to address these issues and promote the journey through the magical world of literature, the project "LEAF" has been developed.

CHAPTER 3

PROJECT MANAGEMENT

3.1 TEAM MEMBERS

The project will be carried out by the contribution of the following four team members.

- Jayadev Tripathi 3rd sem [780314]
- Sahana Shrestha 3rd sem [780336]
- Sanjib Kasti 3rd sem [780339]
- Upendra Shahi 3rd sem [780347]

3.2 WORK BREAKDOWN STRUCTURE

The table below is the work breakdown planning for the project duration.

S.N.	Task Description	Duration	1 st Week	2 nd Week	3 rd Week	4 th Week	5 th Week	6 th Week
1	Problem Identification	3						
2	Analysis	5						
3	Design	9						
4	Coding	22						
5	Implementing and Testing	10						
6	Documentation	27						

3.3 FEASIBILITY STUDY ^[3]

It is the aspect that analyze, studies and predict the overall success and potential of the project under several aspects. It is based on extensive research and investigation regarding the project scenario and conceptual models.

- **Economic Feasibility:** The project does not requires any high financial support as it will be performed in free platform. Further, no any financial needs till its completion.
- **Operation Feasibility:** This application will run smoothly in minimum hardware specifications and does not needs high requirements.
- **Technical Feasibility:** A normal literate people who can understand general English Language can easily handle the operation. In case of difficulty, the logs and manuals in the program will clarify it.
- **Schedule Feasibility:** The expected duration for the completion of this project is around 3 months. The project will be completed in the allotted time frame.

CHAPTER 4

METHODOLOGY

4.1. Algorithm

STEP 1: Start

STEP 2: Display the introduction

STEP 3: Display login Page (1. Guest, 2. User Login, 3. Sign Up, 4. Help)

- a. IF 1: Login as guest
- b. ELSE IF 2: Validate user credentials (TRUE= Continue, FALSE= goto STEP 3)
- c. ELSE IF 3: Register New user and goto STEP 3.
- d. ELSE IF 4: Display help log.
- e. ELSE: Print “Invalid Input” and goto STEP 3.

STEP 4: Display modes: [1. Home Feed, 2. Literatures, 3. Settings)

- a. IF 1:
 - [1. Read Literatures, 2. Feedbacks, 3. Logs & Help)
 - i. Case 1: Chose the genre and read literatures.
 - ii. Case 2: Display feedbacks from registered users.
 - iii. Case 3: Display help
 - iv. Default: Invalid message and goto step ‘a’.
- b. ELSE IF 2:
 - [1. Create Lits, 2. Export Lits, 3. Analytics, 4. Keep Notes, 5. Give Feedbacks]
 - i. Case 1: Create Project
 - ii. Case 3: Save article in file
 - iii. Case 4: View and track progress (Graphs and charts)
 - iv. Case 2: Keep and track notes
 - v. Case 5: Write feedbacks
 - vi. Default: Invalid message and goto step ‘b’.
- c. ELSE IF 3:
 - [1. Set Nickname, 2. Change password. 3. Manage Collaborators, 4. Logout]
 - i. Case 1: Get and save nickname
 - ii. Case 2: Reset password
 - iii. Case 3: View and manage project members.
 - iv. Case 4: goto STEP 3.
- d. ELSE: Print “Invalid” and goto STEP 4

STEP 5: EXIT

4.2 Flowchart

Fig. : 4.2.1

4.3. Tools and Platforms

Tools:

- C and C++
- Turbo, CodeBlocks, VsCode

Platforms: -

- Windows

CHAPTER 5

5.1. Expected Output

```

```
[Mahakavi]

Name           : Laxmi Prasad Devkota
Birthdate      : November 12, 1909
Birthplace     : Dillibazar, Kathmandu, Nepal
Education      : Graduated from Tri Chandra College, Kathmandu
Career         : Poet, playwright, essayist, and translator
Notable works  : "Muna Madan", "Shakuntala", "Sulochana", "Bhikhari", "Jhola", "Kunjini"
Awards         : Mahakavi Shiromani ("The Great Poet") in 1959, Tribhuvan Puraskar in 1961, and the first poet
to             : receive Nepal Ratna Man Padavi ("The Gem of Nepal") in 2003
Literary contributions: Pioneer of modern Nepali poetry, used vernacular language to create a new style of poetry, blend
ed             : Hindu mythology and philosophy with everyday life experiences
Personal life  : Married twice, had nine children
Death          : September 14, 1959, in Kathmandu, Nepal
```
